

Lean Stock™ Inventory System

Capitalize on the opportunity to lower your inventory costs, better manage shelf life and reduce time and errors reordering your inventory.

Sherwin-Williams Automotive Finishes Kanban Inventory Management System

Take control of your inventory

- » **Improve productivity** - Allow employees to spend more time on value-adding activities
- » **Improve product availability** - Ensure you have the correct amount of materials on hand to meet your production schedule and cycle time
- » **Improve profitability** - Inventory orders are generated by demand not minimum/maximum levels, keeping your inventory levels low
- » **Improve repair consistency** - Reduce repair process variation, reinforce your Standard Operating Procedures and ensure consistent quality results

How does it work?

We provide you the resources to organize and barcode your entire inventory. Technicians use a kanban trigger at each stocking location to identify what needs to be replenished. The inventory manager scans the bar codes to place the replenishment order via the sherwin-automotive.com web site. Your order is delivered, verified with the inventory manager and then restocked.
