

# Spies Hecker® Permahyd® Hi-TEC

Advanced Waterborne Technology. Dramatic Results.

# Spies Hecker® Permahyd® Hi-TEC: Mind-Blowing Technology. Jaw-Dropping Beauty.

Spies Hecker® Permahyd® Hi-TEC represents the most advanced waterborne technology available. This unique basecoat formulation not only helps meet the strictest VOC regulations, it enables your refinish technicians to achieve dramatic results in less time, improving your profitability while delivering a finish that will satisfy even your most demanding customers.

---

Based on a patented chemical construction that releases water and allows painters to work without having to flash between coats, this new generation of finishes is at the center of a technologically advanced system that will enhance your position as a top performer in your market.

---

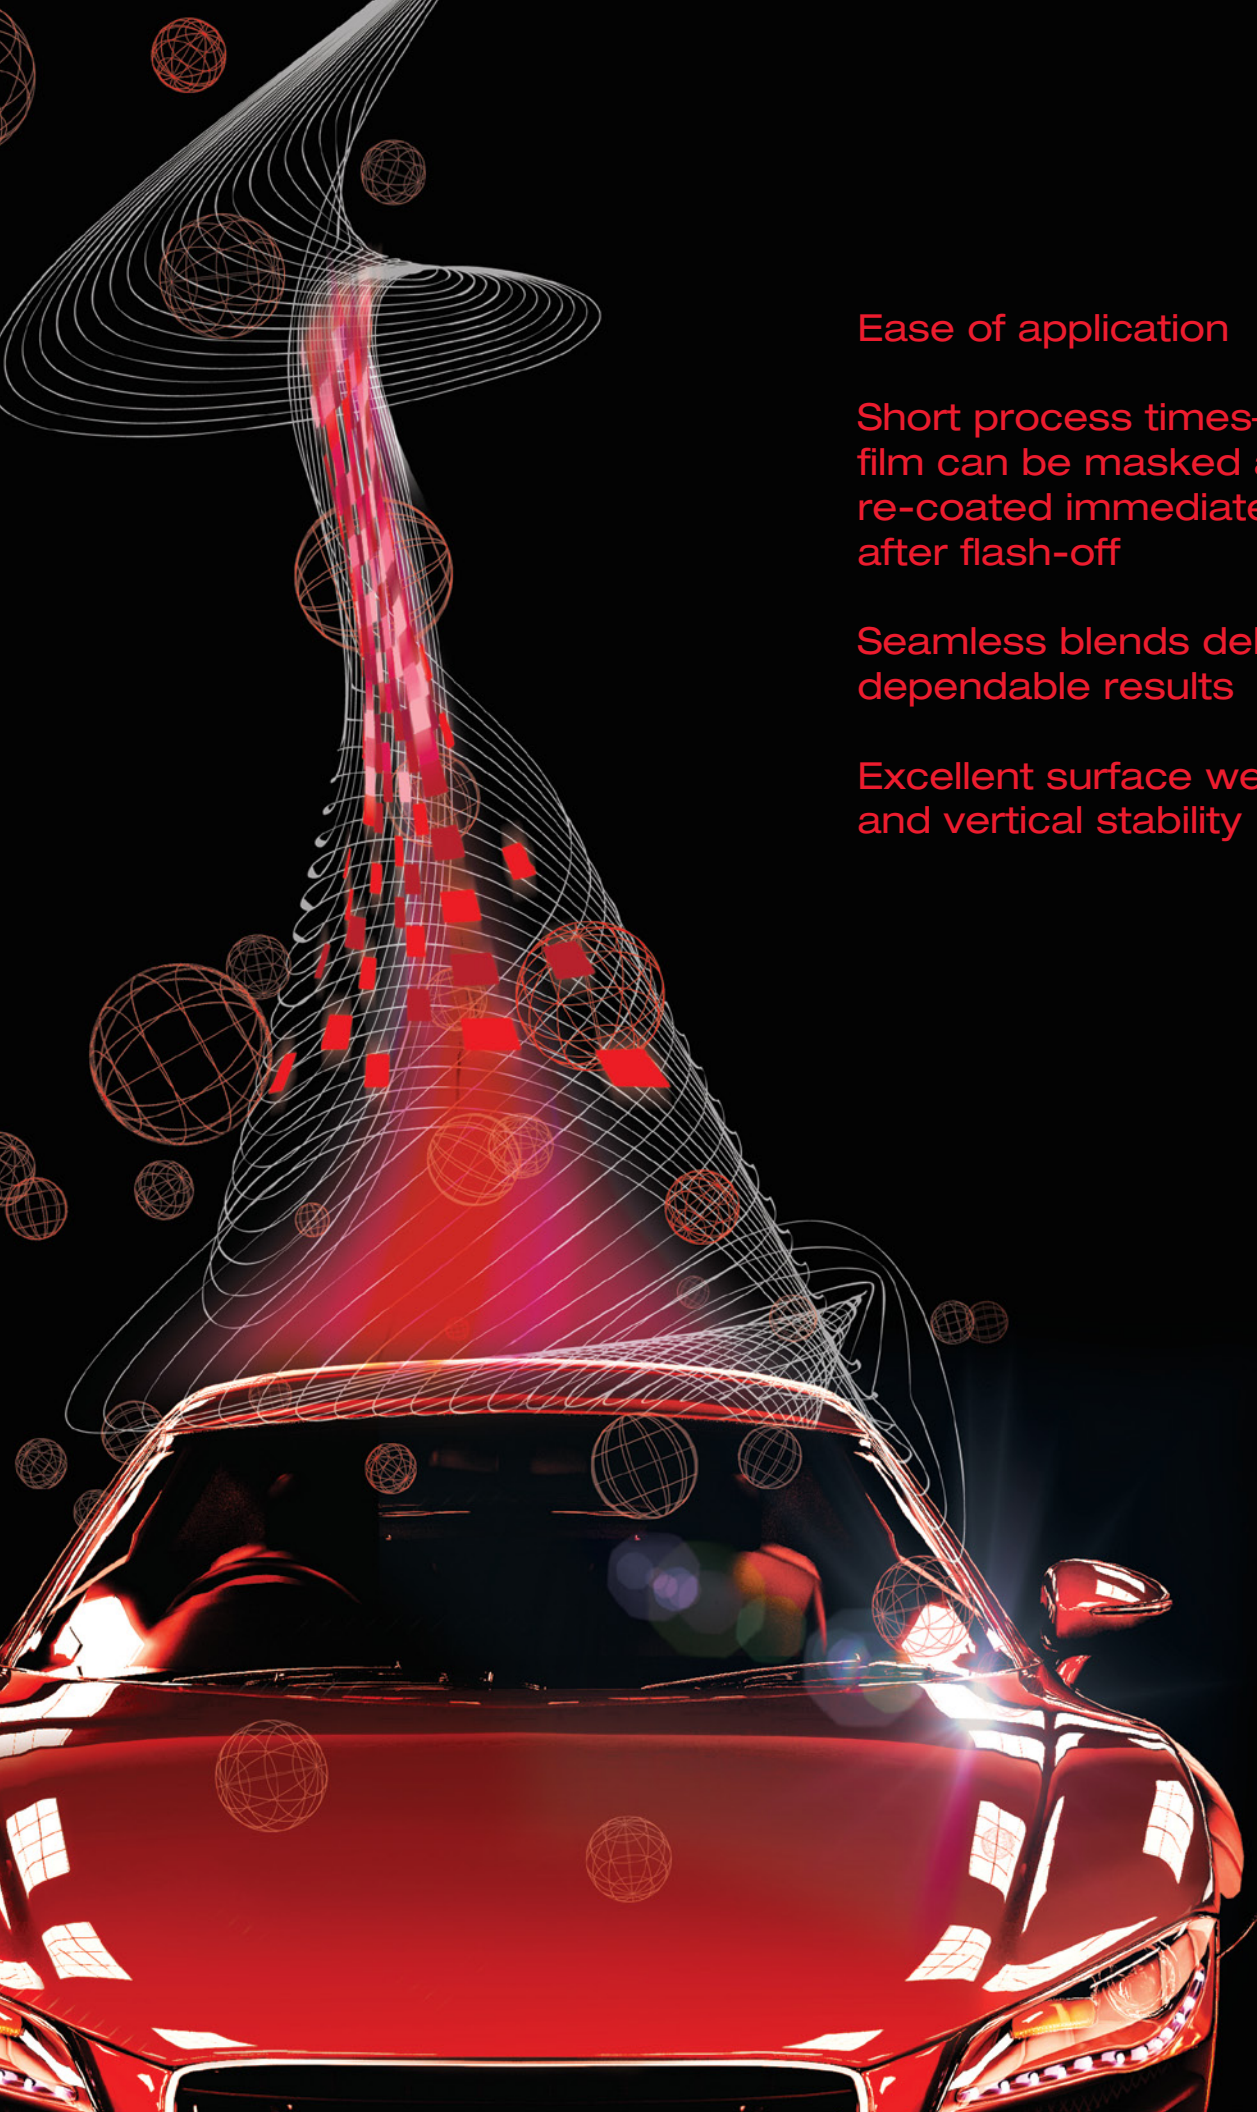

# Greater Control Under Varying Conditions.

Spies Hecker® Permahyd® Hi-TEC waterborne basecoat features a revolutionary paint chemistry that allows water and pigment to work together, giving refinish technicians greater control—especially with sophisticated aluminum flakes and pearls—for easier product handling in a wide range of shop conditions.

With a higher pigment concentration than other waterborne basecoats, Spies Hecker® Permahyd® Hi-TEC offers several distinct advantages, including: exceptional coverage in less than two coats—without losing the ability to adjust color; lower materials usage; lower film build; and a continuous application process.

Ease of application

Short process times—paint  
film can be masked and  
re-coated immediately  
after flash-off

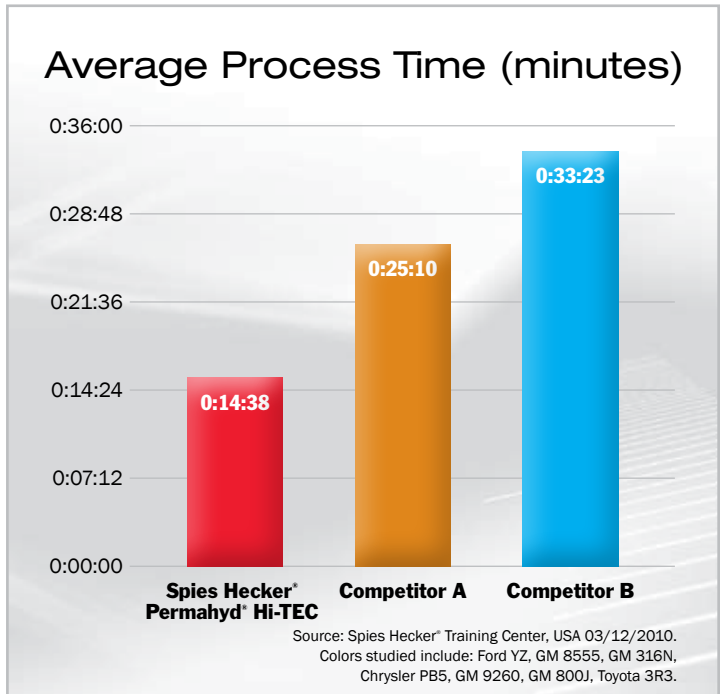

Seamless blends deliver  
dependable results

Excellent surface wetting  
and vertical stability

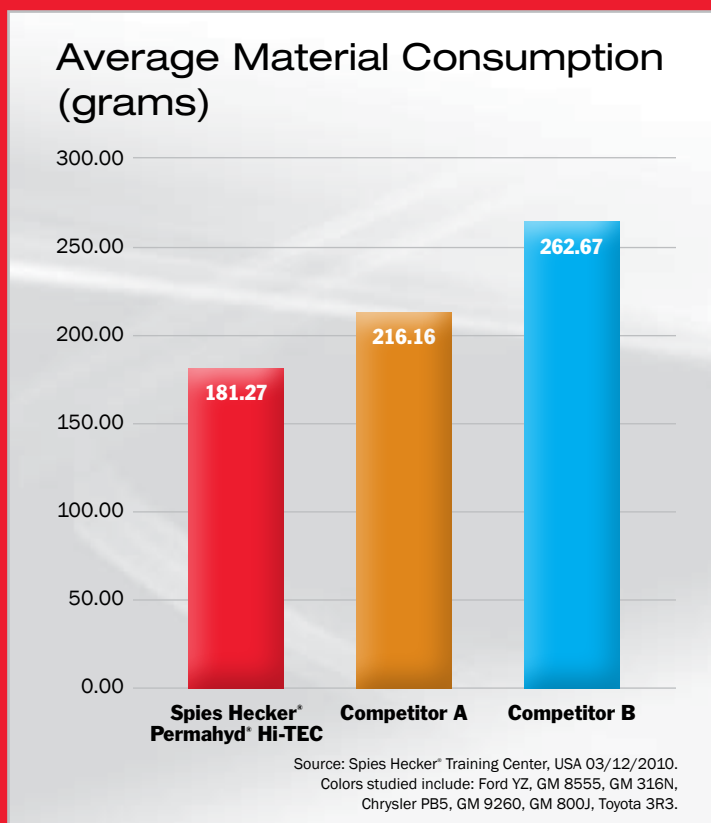

# The technology that helps reduce expenses and decrease cycle time.

Dramatic looks in less time. The quick water release of Spies Hecker® Permahyd® Hi-TEC, which is due to its unique resin architecture, helps keep time in the booth to a minimum because there is no need to flash between coats and surfaces harden to touch and tape in minutes.

Up to 56% faster versus leading competitors' systems.

## Exceptional Coverage.

Spies Hecker® Permahyd® Hi-TEC waterborne basecoat has a higher pigment concentration, using more color and less water by volume, requiring less material and fewer coats. The result is exceptional coverage without losing the ability to adjust color.

Up to 31% material savings versus leading competitors' systems.

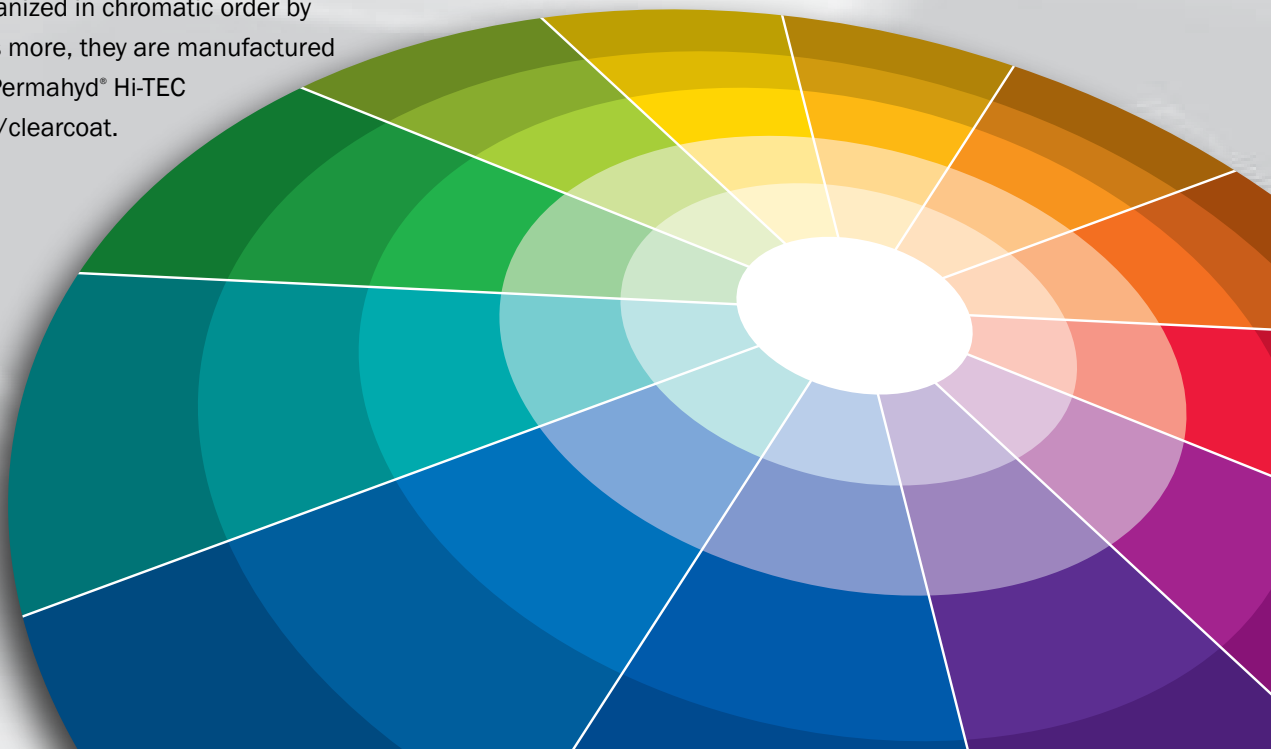

## Versatile Color Tools.

With more than 60,000 colors on the road today and approximately 1,000 new colors added each year, color matching is a major challenge. To help your refinish technicians achieve an accurate match, time after time, Spies Hecker® offers the most advanced visual and digital color matching tools available.

In fact, our fan decks are some of the largest in the industry. In addition to the obvious benefits of their larger size, these fan decks make it faster and easier to find a specific color because they are organized in chromatic order by manufacturer. What's more, they are manufactured using Spies Hecker® Permahyd® Hi-TEC waterborne basecoat/clearcoat.

The special pigments allow body shops to create several thousand new colors, variants, and special shades.

Shops looking for the most advanced waterborne technology in the business choose Spies Hecker® Permahyd® Hi-TEC. Now it's your turn to maximize the flexibility and performance of your shop while delivering the results customers expect.
